Jason,

Attached are AECD documents supporting BFMXH06.7B23 and BFMXH06.7A24 test groups that have been previously submitted in condensed form for EPA review. The only exceptions should be portions included in the overview of Base operation as well as [CBI / Ex. 4](#) purposes. I should also note that there are two more "EPA Template" write-ups for AECDs that were also previously submitted, i.e., [CBI / Ex. 4](#) temperatures. These will follow in the next couple of days to avoid any further delays on the attached submissions.

<<CBI_BFMXH_2011_HD_DIESEL_AECD1_2010-01-13.pdf>>

Hopefully you find this information consistent with previously submitted materials along with supplemental supporting evidence and justifications.

Also being attached to this note in a separate Excel file is a "Sensors" table in a format provided by CARB. EPA also expressed interest in understanding impacts of sensor failures on EGR and any associated performance degradation or torque derates that would indicate a concern (in addition to the MIL) and prompt customers to seek repair. Due to the layout of this file, the native Excel format is being provided to assist in printing or electronic review.
